

2D Vectors

Lecture- 16

Raghav Garg

COLLEGE
WALLAH

2D Vectors

- `vector<vector<int> > v;`
- `vector<vector<int> > v(m);`
- `vector<vector<int> > v(m, vector<int> (n));`
- `vector<vector<int> > v(m, vector<int> (n, k));`

Advantages of vectors over arrays

COLLEGE
WALLAH

Basic STL functions in vectors

- `push_back()`
- `pop_back()`
- `begin()`
- `end()`
- `rbegin()`
- `rend()`

COLLEGE
WALLAH

Ques : Given an integer 'numRows', generate Pascal's triangle.
[Leetcode 118]

COLLEGE
WALLAH

Ques : Score after flipping matrix

[Leetcode 861]

COLLEGE
WALLAH

Ques : Write an efficient algorithm that searches for a value target in an $m \times n$ integer matrix which has the following properties :

- Integers in each row are sorted in ascending from left to right.
- Integers in each column are sorted in ascending from top to bottom.

[Leetcode 240]

Thank you !!
